

THE BEE

WITH THE NAME OF ALLAH, MOST GRACIOUS, MOST MERCIFUL.

Allah (S.W.T.) taught the bee to build its cells in various places.

Listen to Sura al-Nahl (ch. 16): verses 68 & 69:-

“And your Rabb taught the bee to build its cells in hills, on trees and in
(human) habitations:

Then to eat of all the produce (of the earth), and find with skill the
spacious paths of its Rabb: there issues from within their bodies a
drink of varying colours, wherein is healing for mankind: surely in this
is a sign for those who give thought.”

The bee collects juices from different types of flowers and fruit to
make honey.

Since these juices are collected from different types of flowers and
fruit, there are different types and colours of honey, -- dark brown,
light brown and white.

As food, honey is very sweet and wholesome.

It is used in medicine.

The fact that the bee produces honey is a great sign of Allah (S.W.T.).

Worksheet

1) Why are there different types and colours of honey?

2) Can honey be used as medicine?
