

STATES OF WATER

WITH THE NAME OF ALLAH, MOST GRACIOUS, MOST MERCIFUL.

The different states of water are among the signs of Allah (S.W.T.).

There are three states of water:

Solids, liquids and gases.

Our Rabb has enabled us to change water from one state to another by heating and cooling it.

When we heat water, which is in a liquid state, it changes to water vapour, which is gas.

When water is cooled to a very low degree, it changes to ice, which is a solid.

Worksheet

- 1) How has our Rabb enabled us to change water from one state to another?

- 2) Name the three states of water.

- 3) In which of the three states would you place clouds and snow?
